
Penc

Penc is yet another window manager app for macOS. Instead of complicated keyboard shortcuts, Penc is designed for trackpad usage.

Usage

- Double press and hold Command Key (⌘) to activate Penc
 - Drag with two fingers to move the window
 - Pinch with two fingers to resize the window
 - ★ Pinch vertically to make the window taller/shorter, or horizontally to make it wider/thinner

-
- Fast swipe with two fingers to snap the window into halves/quarters
 - Release Command Key (⌘) to take effect

Installation

There are two recommended options for installation.

Homebrew

```
$ brew install penc --cask
```

Download Release from Github

- Download latest dmg file from Releases page
- Mount and open that dmg file
- Copy the application into [Applications](#) folder
- Run the application from [Applications](#) folder
- Penc will request to access accessibility features on first run
- Go to System Preferences > Security & Privacy > Privacy > Accessibility, allow Penc
- Run the application again

System Requirements

Penc supports macOS High Sierra (10.13) and above.

Common Issues

Pinch to resize is not working

In order to detect pinch gesture, [Zoom in or out](#) option must be turned on under the [System Preferences > Trackpad > Scroll & Zoom](#)

Build & Running

```
1 # Install dependencies
2 pod install
3
4 # Open workspace
5 open Penc.xcworkspace
```
