
WTQ v2

Windows Terminal Quake v2 is underway, featuring support for other terminals, other apps in general, and multiple apps simultaneously.

Join the discussion to give us feedback, or take a look at a prerelease.

Manual Download

See the latest release, and pick a zip.

Scoop

```
1 scoop install https://raw.githubusercontent.com/flyingpie/windows-terminal-quake/master/scoop/wtq-latest.json
```

A shortcut is then available named 'WTQ - Windows Terminal Quake', or you can just run 'wtq' from a command line or Win+R.

WinGet

Pending WinGet Manifest PR

```
1 winget install windows-terminal-quake
```

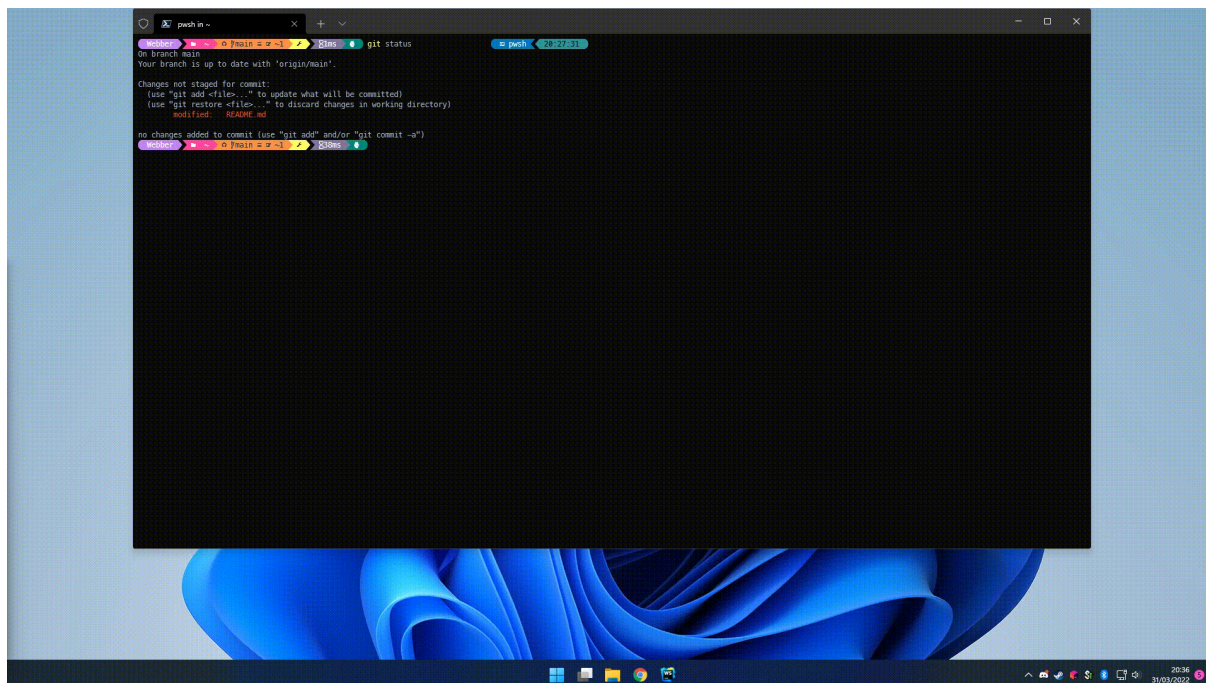

A shortcut is then available named 'wtq', or you can just run 'wtq' from a command line or Win+R.

WTQ v1

If you're missing a feature from v2, feel free to use v1 instead.

Companion program for the new Windows Terminal that enables Quake-style drop down.

- Runs alongside the new Windows Terminal
- Toggle using CTRL+~ or CTRL+Q (configurable, see below)
- Shows up on the screen where the mouse is (eg. multi-monitor and multi-workspace)
- Transparency
- Configurable as fullscreen, or partial screen

Usage

There are a couple of options:

- Download the latest release from the releases page.
- Clone/download the source and run **build.ps1** (uses Cakebuild).
- Clone/download the source and build using Visual Studio.
- Via scoop: `scoop install https://raw.githubusercontent.com/flyingpie/windows-terminal-quake/master/scoop/windows-terminal-quake.json`

See the documentation for more settings and information.
