

---

## DXPopover

A Popover mimic Facebook app popover using UIKit.

The concept of this popover is very simple: add your contentView in a popover, then show the popover in the container view.

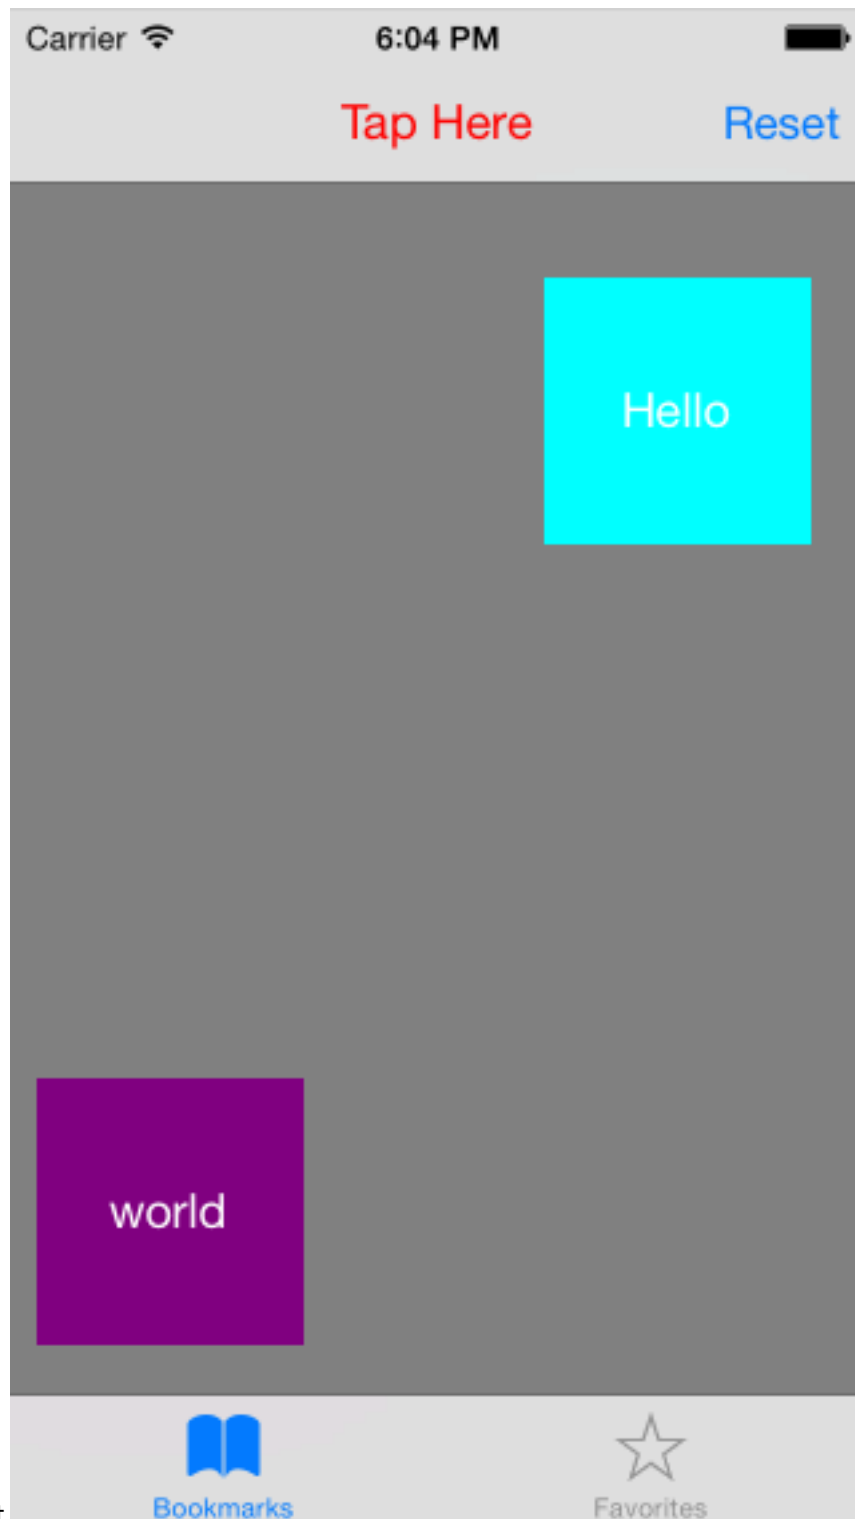

### Requirements

iOS ~> 6.0

### Installation

DXPopover is available through CocoaPods. To install it, simply add the following line to your Podfile:

```
1 pod "DXPopover"
```

##Screenshot.

##Usage

The API and demo is fairly straight forward. You can read details in the demo.

---

## ##Showing the popover

1. make a your contentView, set its frame or bounds.
2. new a DXPopover.
3. show it.

### Simple eg:

```
1 UIImageView *imageV= [[UIImageView alloc] initWithFrame:CGRectMake(0,
    0, 200, 200)];
2 imageV.image = [UIImage imageNamed:@"ig20.jpg"];
3 DXPopover *popover = [DXPopover popover];
4 [popover showAtView:self.btn1 withContentView:imageV];
```

### More conceret eg:

```
1 [self.popover showAtPoint:yourPoint popoverPostion:
    DXPopoverPositionDown withContentView:self.tableView inView:self.
    tabBarController.view]; // 1.Set the show point 2.set The position
    if up or down staying the showPoint, 3.Your contentView 4.The
    containerView
2 __weak typeof(self)weakSelf = self;
3 self.popover.didDismissHandler = ^{ //The callback of popover dimissal.
4     [weakSelf bounceTargetView:titleView];
5 };
```
