
Siji

Siji is an iconic bitmap font based on the Stlarch font with additional glyphs.

It inherits additional glyphs from Sm4tik xbm icon pack, Lokaltog Symbols font, xbm-icon font, Uushi font, FontAwesome, and Tewi font with personal additions.

Siji is built on top of Stlarch, so your existing stlarch unicode values will **just work**.

Siji is a **Work In Progress**, so more glyphs will be added over the time.

What's the difference between Stlarch and Siji ?

- Siji comes with **215 new glyphs**, selectively ported from other fonts and xbm icons with personal additions.
- Increased letter spacing.
- Properly centered glyphs.

Installation

Arch Linux

PKGBUILD by brandon99

CRUX

CRUX port by z3bra

Others

Clone this repo and `cd` into the `siji` directory:

```
1 git clone https://github.com/stark/siji && cd siji
```

Then run the installer script with `./install.sh`.

By default Siji will be installed in your `$HOME/.fonts` directory, it will be created if the directory is non-existent.

If you wish to install Siji in another directory then run the `install.sh` script with the `-d` flag and specify the font directory as an argument.

Example:

```
1 ./install.sh -d ~/.fonts
```

How to get the glyph codes ?

Install `xfd`:

Arch Linux

```
1 sudo pacman -S xorg-xfd
```

Debian

```
1 sudo apt-get install x11-utils
```

Fedora

```
1 sudo dnf install xorg-x11-apps
```

After installing `xfd` run the `view.sh` script:

```
1 ./view.sh
```

Using Siji with other programs:

As long as the program allows to set a fallback font, Siji will work.

Examples of using Siji with some programs:

Dwm

```
1 static const char font[] = "-wuncon-siji-medium-r-normal--10-100-75-75-  
   c-80-iso10646-1" ", " /* For Iconic Glyphs */  
2                          "-*-tamsyn-medium-r-normal  
                           -*-12-*****-1";  
                           /* For Normal Text */
```

Dmenu

```
1 dmenu -fn '-*-tamsyn-medium-r-normal-*12-*****-1', '-wuncon-siji-  
   medium-r-normal--10-100-75-75-c-80-iso10646-1'
```

Lemonbar

```
1 lemonbar -p -f '-*-tamsyn-medium-r-normal-*12-*****-1' -f '-  
   wuncon-siji-medium-r-normal--10-100-75-75-c-80-iso10646-1'
```

TODO

- ☐ More Glyphs!
- ☐ Adding glyphs of different sizes.
- ☐ Improving glyph alignment.
- ☐ Creating small and large version of siji.

Credits

A Big Thanks to the following Authors for their spectacular work which made Siji possible:

Sm4tik for sm4tik xbm icon pack

Stlarch for stlarch font

Sunaku for sm4tik font

Lokaltog for symbols font

w0ng for xbm icon font

Dave Gandy for FontAwesome

Lucy for Tewi font

Phallus for Lemon and Uushi font
