
Snappy - Chat Application

Snappy is chat application build with the power of MERN Stack. You can find the tutorial [here](#)

Installation Guide

Requirements

- Nodejs
- MongoDB

Both should be installed and make sure mongodb is running. ### Installation

First Method

```
1 git clone https://github.com/koolkishan/chat-app-react-nodejs
2 cd chat-app-react-nodejs
```

Now rename env files from .env.example to .env

```
1 cd public
2 mv .env.example .env
3 cd ..
4 cd server
5 mv .env.example .env
6 cd ..
```

Now install the dependencies

```
1 cd server
2 yarn
3 cd ..
4 cd public
5 yarn
```

We are almost done, Now just start the development server.

For Frontend.

```
1 cd public
2 yarn start
```

For Backend.

Open another terminal in folder, Also make sure mongodb is running in background.

```
1 cd server
2 yarn start
```

Done! Now open localhost:3000 in your browser.

Second Method

- This method requires docker and docker-compose to be installed in your system.
- Make sure you are in the root of your project and run the following command.

```
1 docker compose build --no-cache
```

after the build is complete run the containers using the following command

```
1 docker compose up
```

now open localhost:3000 in your browser.
